

See api from network area. This way also we can know if there is no documentation.

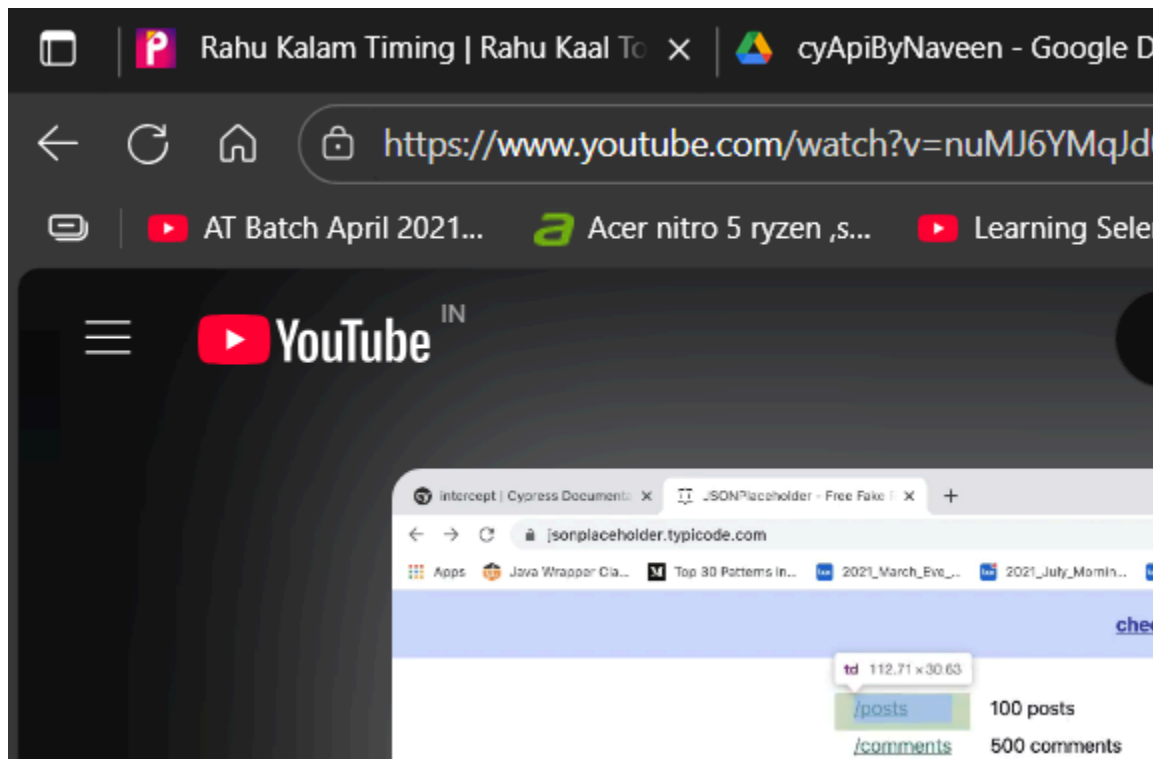

```

5
6   it('test api with simple intercept', ()=>{
7
8     cy.visit('https://jsonplaceholder.typicode.com/')
9
10    cy.intercept({
11      path : '/posts'
12    }).as('posts')
13
14

```

Click on the first link called posts:

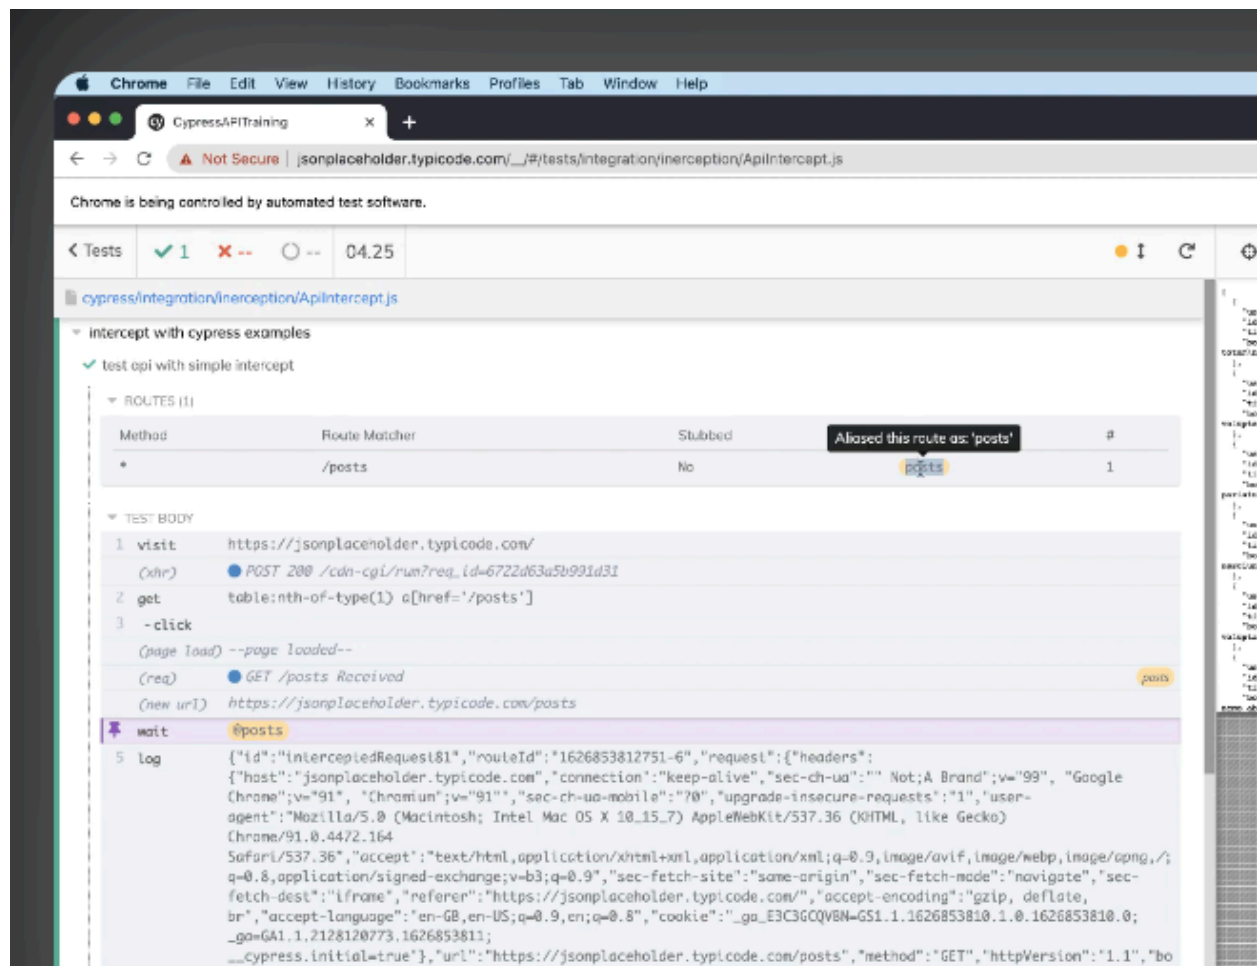

The css selector is written in line 15.

```

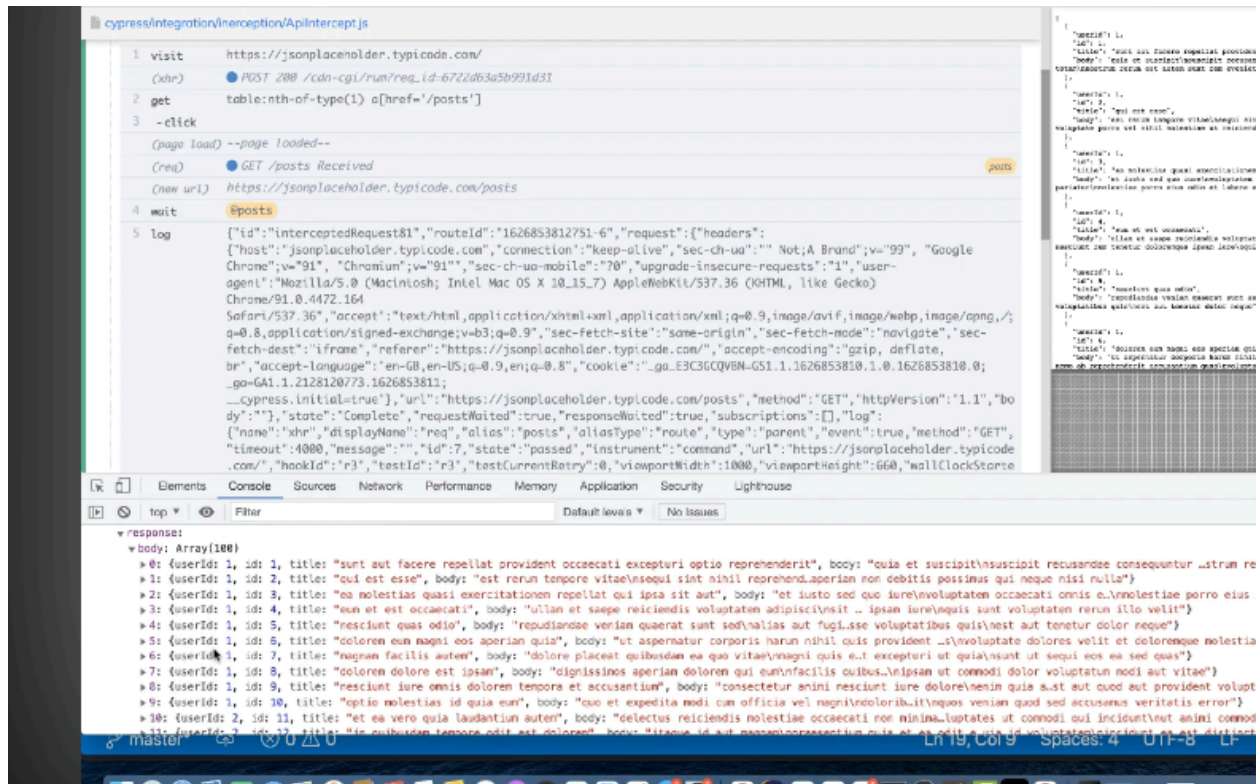

12
13   }).as('posts')
14
15   cy.get("table:nth-of-type(1) a[href='/posts']").click()
16   cy.wait('@posts').then(inter =>{
17     cy.log(JSON.stringify(inter))
18     console.log(JSON.stringify(inter))
19   })
20
21

```

Stub or route created in cypress viewer

Right click on post – inspect – console – expand object – we can see all responses.

Added19

Based on the total response we are asserting.

```

14
15 cy.get("table:nth-of-type(1) a[href='/posts']").click()
16 cy.wait('@posts').then(inter =>{
17   cy.log(JSON.stringify(inter))
18   console.log(JSON.stringify(inter))
19   expect(inter.response.body).to.have.length(100)
20
21 })
22

```

Mocking-

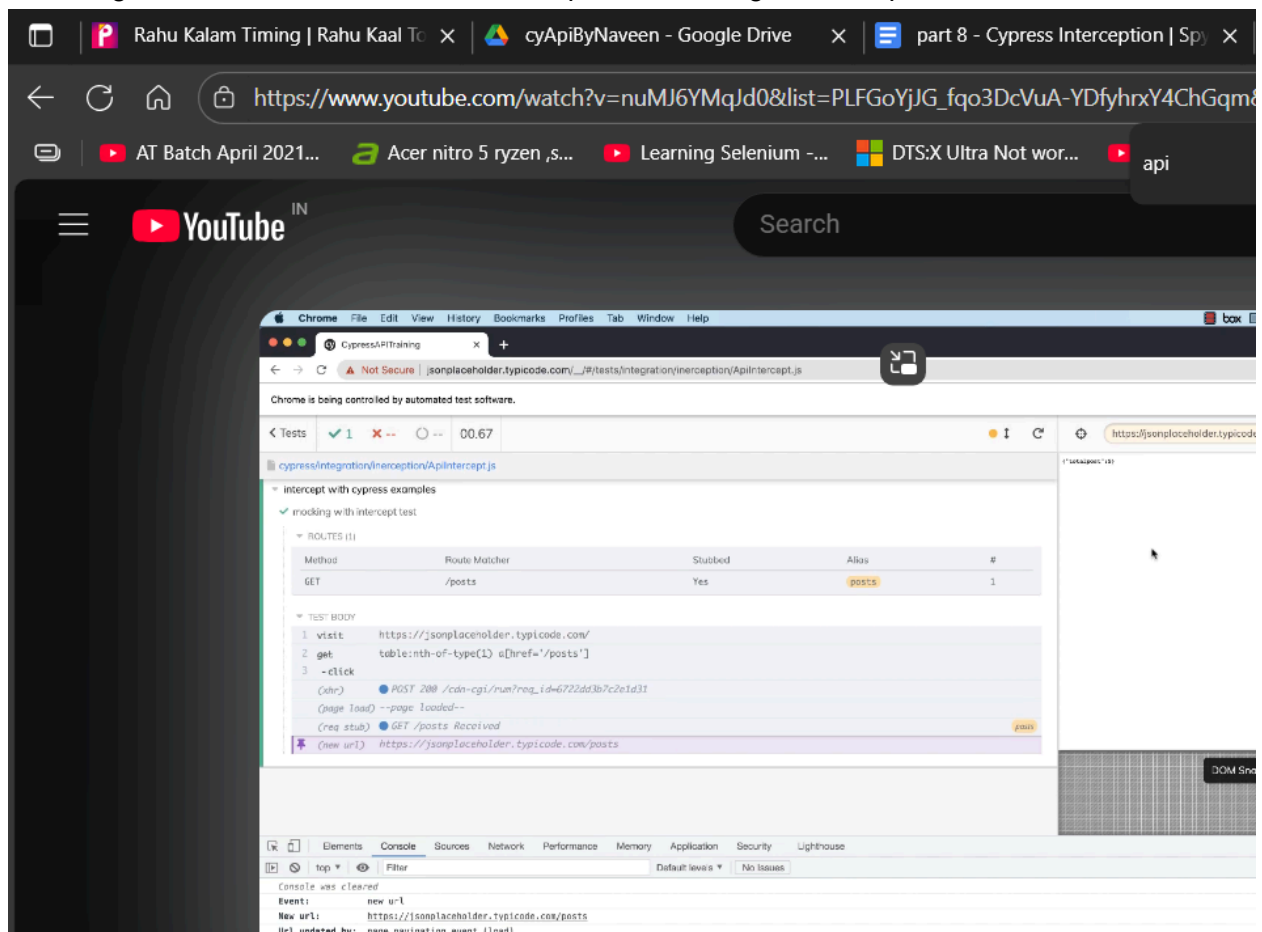

You give what you want.

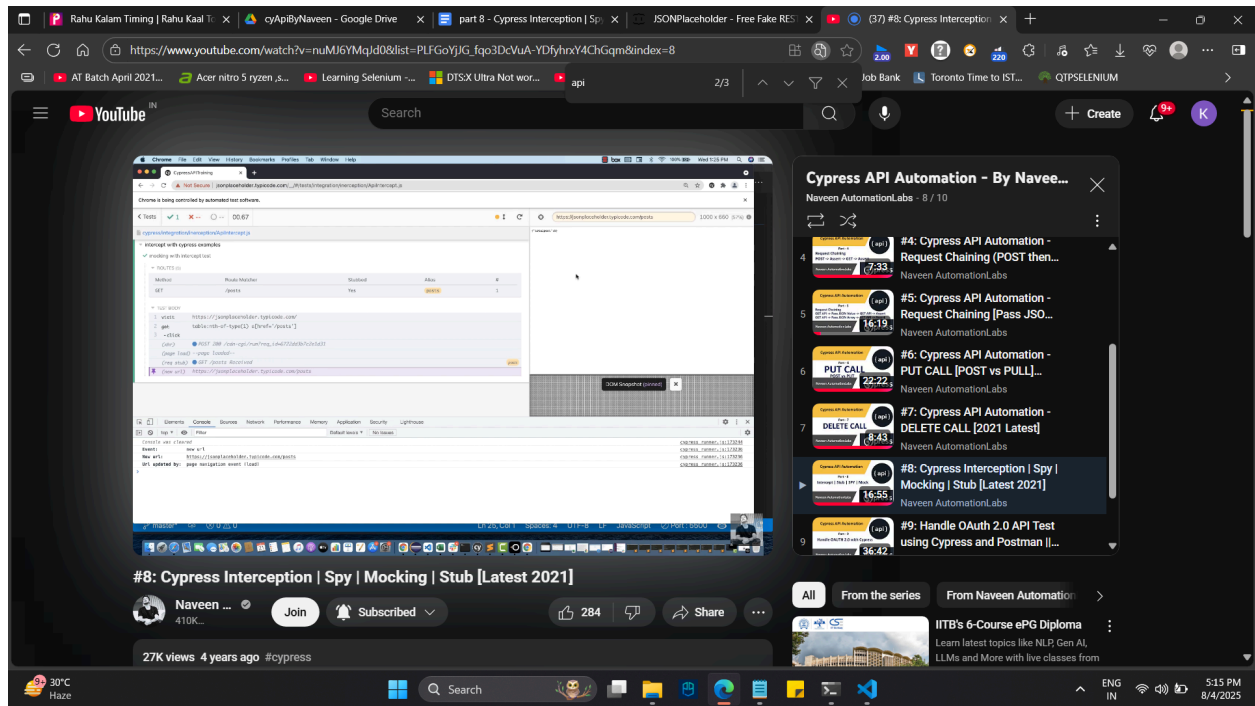

We gave totalpost:5 in line 30.

Whenever some one calls post now we get the response we want.

```
22
23
24   })
25
26
27   Open Cypress | Clear ".only"
28   it.only('mocking with intercept test', ()=>{
29
30     cy.visit('https://jsonplaceholder.typicode.com/')
31     cy.intercept('GET', '/posts', {totalpost:5 }).as('posts')
32     cy.get("table:nth-of-type(1) a[href='/posts']").click()
33
34   })
35
36
```

See in right hand side once we click on the post line - we get our response.

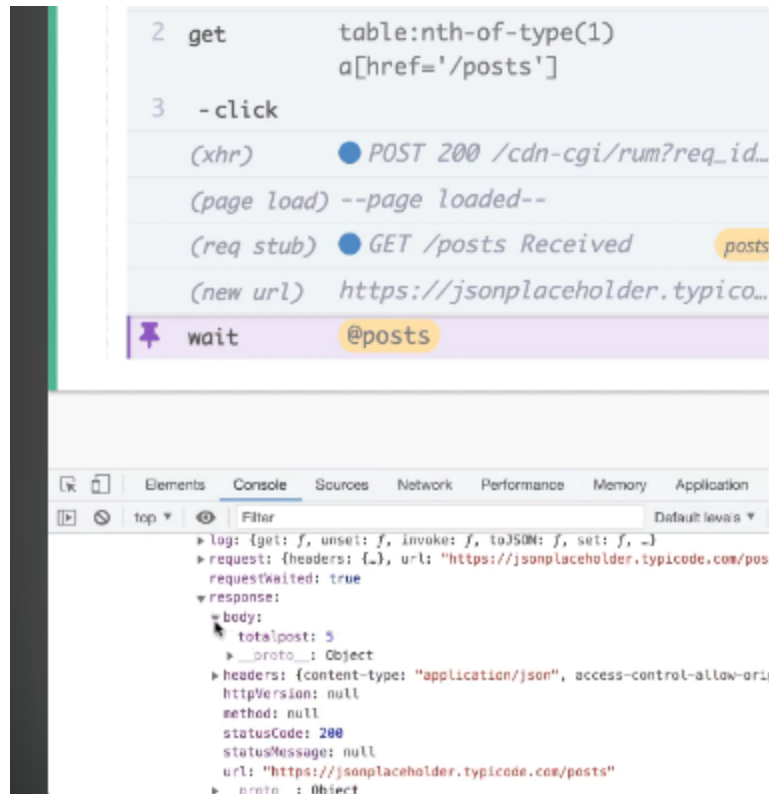

Add wait and check console. Added32 to wait for the post to run.

```

27 it.only('mocking with intercept t
28
29 cy.visit('https://jsonplaceho
30 cy.intercept('GET', '/posts',
31 cy.get("table:nth-of-type(1)
32 cy.wait('@posts')
33 })
34

```

Changed30

added more attributes like name which we want in our output.

```

23
24   })
25
26   Open Cypress | Clear ".only"
27   it.only('mocking with intercept test', ()=>{
28
29     cy.visit('https://jsonplaceholder.typicode.com/')
30     cy.intercept('GET', '/posts', {totalpost:5, name: 'naveen'}).as('posts')
31     cy.get("table:nth-of-type(1) a[href='/posts']").click()
32     cy.wait('@posts')

```

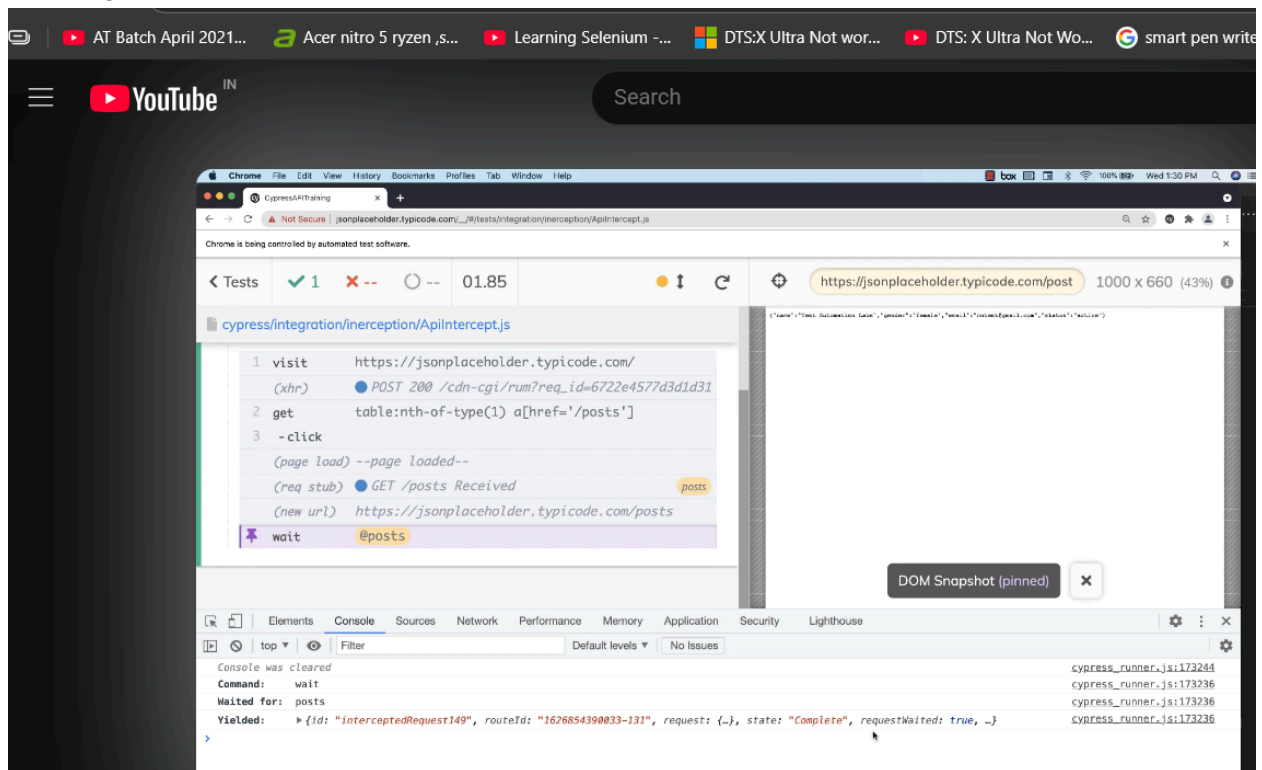

Add stub mock and fixture together-

```

34
35 it.only('mocking with intercept test with dynamic fixture', ()=>{
36
37     cy.visit('https://jsonplaceholder.typicode.com/')
38     cy.intercept('GET', '/posts', {fixture: 'createuser.json'}).as('posts')
39     cy.get("table:nth-of-type(1) a[href='/posts']").click()
40     cy.wait('@posts')
41 })

```

In the right hand side we can see the fixture data.

Click on post and expand response – body.

1 visit https://jsonplaceholder.typicode.com/
(xhr) POST 200 /cdn-cgi/rum?req_id=6722e535bbcf1.
2 get table:nth-of-type(1) a[href='/posts']
3 -click
(page load) --page loaded--
(req stub) GET /posts Received
(new url) https://jsonplaceholder.typicode.com/posts
wait @posts
